

SLEEP TIPS FROM THE NATIONAL SLEEP FOUNDATION

1. **Practice a relaxing bedtime ritual.** A relaxing, routine activity right before bedtime conducted away from bright lights helps separate your sleep time from activities that can cause excitement, stress or anxiety which can make it more difficult to fall asleep, get sound and deep sleep or remain asleep.
2. **If you have trouble sleeping, avoid naps, especially in the afternoon.** Power napping may help you get through the day, but if you find that you can't fall asleep at bedtime, eliminating even short catnaps may help.
3. **Exercise daily.** Vigorous exercise is best, but even light exercise is better than no activity. Exercise at any time of day, but not at the expense of your sleep.
4. **Evaluate your room.** Design your sleep environment to establish the conditions you need for sleep. Your bedroom should be cool – between 60- and 67 degrees Fahrenheit (or between 16 and 19 degrees Celsius). Your bedroom should also be free from any noise that can disturb your sleep. Finally, your bedroom should be free from any light.
5. **Sleep on a comfortable mattress and pillows.** Make sure your mattress is comfortable and supportive. The one you have been using for years may have exceeded its life expectancy – about 9 or 10 years for most good quality mattresses. Have comfortable pillows and make the room attractive and inviting for sleep but also free of allergens that might affect you and objects that might cause you to slip or fall if you have to get up during the night.
6. **Use bright light during the day to help manage your circadian rhythms.** Avoid bright light in the evening and expose yourself to sunlight in the morning. This will keep your circadian rhythms in check.
7. **Avoid alcohol, cigarettes, and heavy meals in the evening.** Alcohol, cigarettes, and caffeine can disrupt sleep.
8. **Wind down.** Your body needs time to shift into sleep mode, so spend the last hour before bed doing a calming activity such as reading. For some people, using an electronic device such as a laptop can make it hard to fall asleep, because the particular type of light emanating from the screens of these devices is activating to the brain.
9. **If you can't sleep, go into another room, and do something relaxing until you feel tired.** It's best to take work materials, computers, and televisions out of the sleeping environment. Use your bed only for sleep and sex to strengthen the association between bed and sleep. If you associate a particular activity or item with anxiety about sleeping, omit it from your bedtime routine.
10. **If you're still having trouble sleeping, speak with your doctor or find a sleep professional.** You may also benefit from recording your sleep in a Sleep Diary to help you better evaluate common patterns or issues you may see with your sleep or sleeping habits.
